DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-17, drawn to an absorbent article, classified in class 604, subclass 383.
- II. Claims 18-19, drawn to an absorbent article, classified in class 604, subclass 378.
- III. Claims 20-28, drawn to an absorbent article, classified in class 604, subclass 385.23.

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the absorbent article of Group II does not require a central void or a central absorbent member disposed over the central void. The subcombination has separate utility such as an absorbent core for a bandage to wick other types of bodily fluids.

Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP §

806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because absorbent article of Group III does not require a central void or a central absorbent member disposed over the central void. The subcombination has separate utility such as an absorbent core for a bandage to wick other types of bodily fluids.

Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the absorbent article of Group III does not require vertically oriented segments of hydrophobic material. The subcombination has separate utility such as a paper towel for wicking.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Nick Kottis on 28 November 2005 to request an oral election to the above restriction requirement, but did not result in an election being made since Applicant requested a written requirement be sent.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
